焊接指导

Guideline for Soldering

推荐波峰焊曲线 The wave peak welding curve is recommended :

注意: Note

- 1、铅焊料温度剖面
Lead solder temperature profile
- 2、波峰焊不应做一次以上
Peak welding shall not be done more than once
- 3、焊接时，不要在加热过程中对 LED 施加压力
When soldering, do not put stress on the LED during heating
- 4、焊接后，不要使电路板翘曲
After soldering, do not warp the circuit board

烙铁条件 Soldering Iron

每个端子都要去烙铁尖端温度低于 300°C 为 3 秒内一次少于烙铁容量 25W 。 离开两秒钟然后更多的间隔，并做焊接每个终端。手工焊料通常在开始的时候容易损坏产品。

Each terminal is to go to the tip of soldering iron temperature less than 300°C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

*手工补数 Repairing

修理不应在 LED 焊接后进行。当修理是不可避免的是，应该使用双头烙铁 (如下图所示)。应该是事先确认 LED 的特性是否会或不会损坏通过修理。

Repair should not be done after the LED have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LED will or will not be damaged by repairing.

使用注意事项

Precautions

XL-ITR9608由红外发射二极管和 NPN 硅光晶体管组成，它们并排封装在黑色热塑性外壳中的汇聚光轴上。光电晶体管只接收来自IR的辐射。这是正常情况。但当物体在中间时，光电晶体管不能接收辐射。有关更多组件信息，请参阅IR和PT。

XL-ITR9608 It is composed of infrared emission diode and NPN silicon photo transistor, which are packaged side by side in black On the converging optical axis in the thermoplastic shell. Photo transistor only receives radiation from IR. This is normal Condition. But when the object is in the middle, the photo transistor cannot receive radiation. For more component information, please Refer to IR and PT.
